- ANVIL
- STIRRUP
- EAR WAX
- EAR DRUM
- VIBRATIONS
- SOUND
- EAR MOLD

## Did You Know?

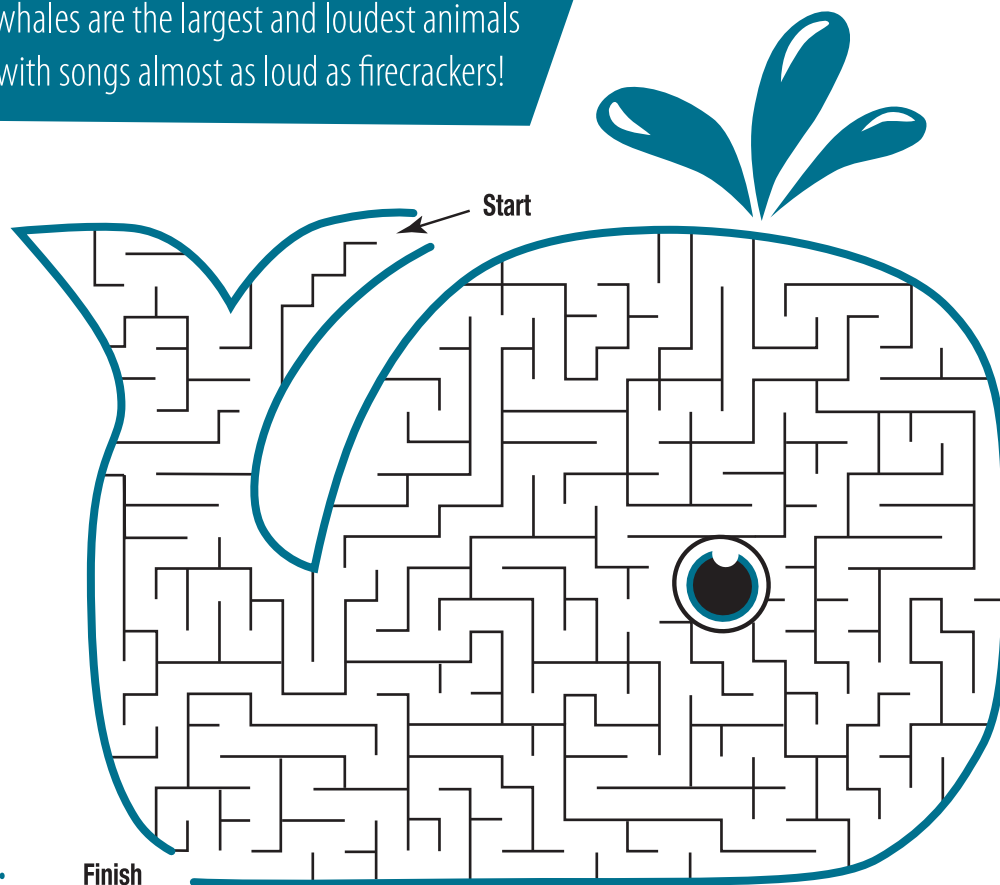

Blue whales are the largest and loudest animals alive with songs almost as loud as firecrackers!

# Protect Your Hearing!

Have you noticed that most musicians use ear plugs or headphones to protect their hearing? You can protect your ears by following these easy guidelines:

- When you are listening to music, if people have to yell for you to hear them... then your music volume is too high.
- Give your ears a break, only listen to loud music for a half hour at a time.
- Anytime you will be around loud sounds like concerts or lawnmowers... use ear plugs or protective headphones!

For more information about hearing, contact your local audiologist.
